

Our microinverter converts the DC output from the solar panel module, to the proper AC current for the grid. Each microinverter is designed to handle two or four solar modules simultaneously. Each individual module has its own MPPT curve. These grid-tied solar PV microinverters are designed to operate in a variety of conditions, with temperatures ranging from -40°C to +65°C. Our microinverters carry a 12-year warranty, and have an expected lifetime of 25 years (matching the life expectancy of most solar modules).

Optional models:

600W BPE600-US/EU/SAA

1300W BPE1300-US/EU/SAA

Monitoring System

The DMU (Data Monitoring Unit) Communications Gateway provides network access to the solar array, enabling comprehensive monitoring and management of the solar system. Solar professionals and system owners can easily check the status of the system using the DMU's LCD display or obtain detailed performance data via the EMA through the Internet.
