

4iE[®] SMART WIFI THERMOSTAT

The Right Temperature

SmartGeo™

Automatic control of your heating
The 4iE learns how long it takes to warm the house so it's just up to temperature as you get up. As soon as the last person leaves home, the 4iE automatically begins reducing the temperature to save energy.

Always up to date with your family schedule, even if you aren't
The 4iE works with multiple users, so your home will always be just up to temperature whenever anyone arrives, whatever time of day. No programming required.

Gets to work straight away, with no effort. The 4iE gives you an automatic program based on the type of room it's in, so you don't have to tell it what time you leave, get up or go to sleep.

Effortlessly

Your home will automatically be at the right temperature. Never come home to a cold house, or overpay on your energy bills again.

TECHNICAL SPECIFICATIONS

The 4iE requires 230VAC power at all times
Compatible with electric and hydronic underfloor heating systems up to 16A
Compatible with Combi and System boilers with Switch Live (230VAC) input
For lower voltage, or volt-free systems, a contactor must be used

High quality design, personalised for you

The 4iE is designed to look great in both modern and traditionally styled homes, with high-gloss effect front faces, and bevelled chrome edges to reflect wall colours.

Available in Onyx Black and Bright Porcelain.

A range of vinyl Overlays are available in bold colours and textured metal and wood effects.

You can even use a custom photo to complement your wallpaper.

All can be found on fireflex.co.uk

The large colour touchscreen can be customised with different themes and uploadable photo backgrounds. There's even a 7-day local weather forecast.

The 4iE can control your heating automatically and reduces your heating usage by up to 25%.

It works by using the location services built into smartphones, as well as learning your routines and the most efficient settings for your home.

So your heating is always at the right temperature, effortlessly. Your home is automatically warm as you arrive, and running efficiently when you're away. Just like magic.
